9. ☐ Other _____

1. This action is in response to application received on March 17, 2004. Claims 1-46 are pending.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. In the claims:
 - A) in claim 44,
 1. in line 9, changed "components" to --component--.
4. The above examiners amendment was necessary in order to place this application in condition for allowance. The above amendment does not change the scope of the claim. The phrase "the first components" lacked proper antecedent basis because previous phrases recite a single first component. The above amendment corrects this problem. If applicant does not agree with the changes made by the examiner, the examiner will enter a 312 amendment for correcting the above problem.
5. The following is an examiner's statement of reasons for allowance:

The cited prior art describes systems and methods for calibrating a communication bus or channel by detecting/measuring phase relationships between clock, timing and data signals. The cited references describe performing calibration during booting/initialization and at set time intervals using a timer to determine when re-calibrating is to be performed. None of the cited references teach or suggest the claimed invention.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest a method or apparatus for calibrating a communication channel or bus comprising the combination of interrelated elements or steps and including using monitor circuits in one of the first and second components to monitor a signal having a characteristic that drifts relative to the reference clock signal at the monitor circuits by amounts that correlate with the drift of a stored operating parameter value of the communication channel/bus in order to track the amounts of drift in the characteristic of the monitored signal and updating the operating parameter value based on the amounts of drift in the characteristic of the monitored signal as claimed in independent claims 1, 13, 28 and 44-46.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

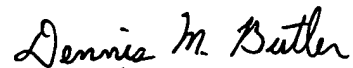

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dennis M. Butler whose telephone number is 571-272-3663. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
